

Bullivants **HIRE**

Lifting and Handling Solutions

An Introduction...

Bullivants have now broadened our market offer with the introduction of Bullivants Hire. We recognise that many of our customers get involved in work which often includes the requirement to source high value capital product but only for limited usage. This is particularly the case in Oil & Gas, Mining and the Construction Industry. Our hire fleet contains a range of slings, hardware, materials handling product, fabricated lifting gear, height safety equipment and calibrated testing solutions.

With our industry leading knowledge and capability many of the items in our fleet are available as a wet hire with one of our Technical Service Representatives. This allows our customers the comfort of knowing that everything they are doing is being carried out in compliance with Australian Standards and to best practice requirements. Each of our Technical team carries an official accreditation card showing their level of competency. There are four levels and we will always match our person to the type of work required. This guarantees you have the right person for your hire.

We understand the need to offer flexibility with regards to time and cost and so we are able to provide daily, weekly, monthly and contract rates for our hire fleet. Speak to our friendly staff and work out which provides you with your best solution.
