

Main Features:

- Excellent corrosion resistance, especially in marine and coastal environments
- Ideal for exposure to saltwater, chemicals, and harsh weather
- Non-rusting material (no coating required, corrosion resistance is inherent)
- Suitable for use in wet, humid, or chemically aggressive environments
- Attractive, polished finish for visible or aesthetic applications
- Low maintenance with long service life
- Resistant to pitting and crevice corrosion compared to lower-grade stainless
- Commonly used for general fastening, securing, and non-critical connections
- Suitable for applications where appearance and corrosion resistance are important
