

Bullivants HMPE Hose Restraint (Whip Check)

Hose systems carry pressurised air, water or hydraulic fluid. Weaknesses, wall failures, or sudden releases from fittings can cause the hose to whip, risking equipment damage or catastrophic injury to operators. The Bullivants HMPE Hose Restraint is designed to prevent uncontrolled whipping and protect nearby workers in case of system failure.

This potentially lifesaving product is lightweight and improves productivity as it can be fitted to existing hoses without need to disconnect hose system.

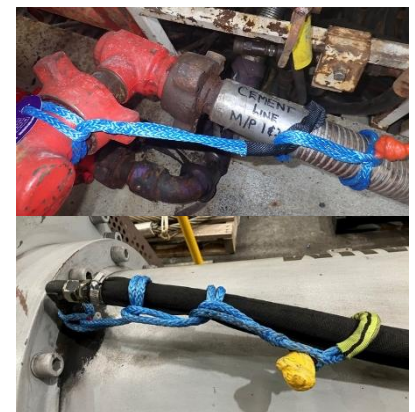

Specifications:

Bullivants Part Number	Length m	Hose Diameter inch	Knot Colour	Max PSI
WHOSE-DYN-09140	1.40	1 – 2	Yellow	5000
WHOSE-DYN-09155	1.55	3 – 4	Orange	1200
WHOSE-DYN-09170	1.70	5 – 6	Green	500

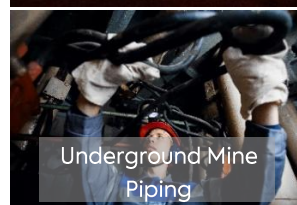

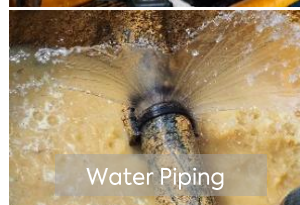

*Other sizes available on request

Main Features:

- Improved productivity - can be fitted to existing hoses without need to depressurise or disconnect hose system.
- HMPE material eliminates risk around rust, potential spikes from broken wires and provides ease with manual handling.
- Low maintenance
- Simple to use, lightweight, easy to install and ergonomic design
- High pressure and (temperature) resistance
- Clear identification and traceability
- NATA Test Certificates available on request.
